

VR meets Architecture

Multi-User Virtual Show Room

Let your customers experience anywhere your real estate!

Imagine your sales team leading your customers through an immersive, virtual exploration of your next construction or interior design project. No trips to the construction site, no expensive models to build, no travel to the building location. Just one Virtual Show Room covers it all.

You and your customer could see, walk and experience together the final result even before it's built.

Together you could:

- Walk inside and around the building, room, patio, etc.
- Explore textures and materials options:
 - Walls, floors, counters, fabrics, etc.
- Play with illumination alternatives, both natural and artificial
- Add or move your interior design objects:
 - Furniture, appliances, light fixtures, etc.
- Experience alternative room lay-outs.
- Move instantaneously from one model to another and much more.

Dream Machine[®] Architecture

is our turn-key multi user VR Sales & Marketing solution
for the Architecture, Interior Design and
Construction Industry.
